

FLOWERS SENT OIL EXCHANGE

Many Floral Tributes Mark Its Opening in El Paso.

Beautiful floral offerings help to make attractive the new Central Stock and Oil exchange, just opened in the old S. P. office on North Oregon street, next to the postoffice. These flowers were sent by friends of the management, in the way of felicitation upon the opening.

The new exchange has daily calls at 10:30, 1:30 and 3:30 and lists stocks of all characters, including mining, oil, bank, municipal and Liberty bonds.

The officers are: Robert McIntyre, president; James L. Stephens, vice president; Chas. H. Walker, secretary and treasurer; and J. L. Nysewander, trustee.

Flowers were sent on the occasion of the opening by W. L. Barnard, Victor Carrasco, Hotel Sheldon, C. C. Doss, Geo. L. Wilson, John E. McPherson and E. H. Evans & Co.

E. E. Long, well known in the city, who was with the first National Bank seven years, is cashier.

Robert McIntyre, the president and organizer, comes from Arizona. Tulsa was dealing in cattle. He was the promoter and manager of the Miami Shampoda fraternal day celebration last Labor day at Miami, Ariz. In 1912-1913 he was the next largest oil lease holder in the southern Alberta, Canada, oil rush.

The concern is installing private wire quotations on all stocks at Ranger, Burkburnett, Wichita Falls, Fort Worth and all eastern markets, as well as San Francisco.

Balentine Has 10,000 Barrel Gushing Well

Former El Pasoan's First Well At Eastland Is Big Proposition.

Eastland, Tex., July 12.—S. F. Balentine's Pleasant Grove Chas. well, about 200 feet from the Perkins gusher, is making 10,000 barrels a day.

It came in Friday. The gas pressure is heavier than in any of the adjoining wells. It is four miles north of Eastland in the center of a district, the northern limit of which is marked by the Holleman well, producing 1500 barrels, one mile south of the Stephens county line.

Mary El Pasoans are interested in the Balentine well as Mr. Balentine is a former El Paso man. He was in the brokerage business there until a short time before he was discovered in the gusher field. He came here and made some money in buying and selling leases, finally acquiring the land on which the gusher has just come in.

The Texas company got 30,000,000 feet of gas in its well late Friday, eight miles northwest of Eastland.

After the big fire we are again prepared to care for our customers with entirely new stock of seeds, bird, dog, poultry supplies, etc., at our new quarters, old location, El Paso Seed Co., 512 E. San Antonio St., El Paso, Tex. Lee Newman, Telephone 4601.

Intervention in Mexico Means a Greater El Paso. Buy a telegram. I have two good buys. Lee Newman, Telephone 4601.

GREAT RUSH ON TO NEW FIELD

Pool Northwest of Burkburnett Is Now Developing Very Rapidly.

The great new pool developing and extending northwest from the town-site of Burkburnett, Wichita county, Tex., will produce more excitement and more oil than any field in Texas, according to Carl S. Reeves, of the Ranger Rock Consolidated Oil Co., who has returned from that field of great gushers.

"People are running wild to get something before the other fellow," said Mr. Reeves. "An acre which could have been bought 30 days ago for \$2000 is now hard to get at \$3000. The pipe lines are unable to handle the rapidly increasing production and for that reason many wells are drilled to the sand and held there until storage tanks and pipe line connections can be made. Many of these wells blow themselves in, which is a beautiful sight."

The Ranger Rock Consolidated Oil Co.'s well No. 1 is down 1500 feet on that concern's ten acre tract, just 1000 feet northwest of the Roberts & Hill gusher. The company is building its derrick for well No. 2 and intends to put down six wells on this tract.

The Great Southern Oil company has a gushing job in its No. 1 on the Baumgartner tract. It is flowing by heads at 547 feet in hard gray lime.

The Ranger Texas gusher, on the C. J. Harrell tract, is shooting out one fifth of its 75,000,000 cubic feet of gas through a hole in the ground ten feet in diameter.

The Huesco Rancher company's well, on the J. C. Holleman tract, which began with a production of 1000 barrels, is now producing about 1500 barrels.

The Arkansas Natural Gas company brought in its Mrs. Tully Chaswell well, three miles east of Eastland, with a flow of 50 barrels an hour this week.

Hold Big Well For Building Of Pipe Line

Huge Gassers Indicate Heavy Producers In Eastland Field.

Eastland, Texas, July 12.—In its unfinished state, the States Oil corporation, N. E. Turner well, two and one half miles northeast of Eastland, is making 1000 barrels of oil daily. The well reached the pay sand at 2515 feet this week and was shut down until suitable pipe line connections and storage tanks could be made.

The Albers Oil company's well, on the J. W. Turner tract, is making 16,000,000 cubic feet of wet gas with the bit four feet from the pay sand. This well is situated about four miles north of Eastland and 600 feet from Balentine's No. 1, Pleasant Grove church well.

The Ranger Rock Island Oil company and the West Virginia Coal and Gas company have showings of oil and gas on top of the lime encountered at a depth of 2250 feet on the Wright and Cotton tracts, respectively. These wells are situated in the same neighborhood four miles northwest of Eastland.

The Great Southern Oil company has a gushing job in its No. 1 on the Baumgartner tract. It is flowing by heads at 547 feet in hard gray lime.

The Ranger Texas gusher, on the C. J. Harrell tract, is shooting out one fifth of its 75,000,000 cubic feet of gas through a hole in the ground ten feet in diameter.

The Huesco Rancher company's well, on the J. C. Holleman tract, which began with a production of 1000 barrels, is now producing about 1500 barrels.

SHALLOW WELLS FIND PAY SAND

Moderate Producers Multiply in Several Counties in Oklahoma.

Tulsa, Okla., July 12.—Frank Gillespie and associates have a 16 barrel well in a test on the Jeff Poorboy land, the southwest quarter of section 24-25-14, Osage district.

The Gypsy Oil company and others have completed a well in the northwest quarter of section 8-24-10, Osage county, which is making 200 barrels. This is the fifth completion on the property.

W. D. Hall and associates have completed their test in section 6-14-12, west of Okmulgee, in Okmulgee county. This test is producing 720 barrels of oil daily and is an offset to a big well recently completed by the Cosmos Oil company.

The Minnehoma Oil company has completed its initial test in the northeast quarter of section 12-35-3, Osage county. This well is producing 40 barrels of oil.

The Walker Valley has its two wells on the pump in section 4-24-10, Stephens county. The run is about 150 barrels per day, but a thorough test has not yet been made and it is the belief of the promoters that at a lower depth a better sand will be encountered.

The Magnolia company is getting ready to drill several wells in section 11-24-24, Stephens county, Oklahoma. Donahill and Melton have a dry well in section 21-24-24 that is making 25 barrels of oil daily at a depth of 212 feet. The production will no doubt settle down to 15 barrels per day.

The Texas company is getting ready for its deep test to be sunk in section 1-24-24, Stephens county.

The Pease Oil company is drilling at 600 feet in its test in section 1-24-24, Stephens county.

OIL PRODUCTION SUSPENDED BY BIG RAILROAD COMMISSION

Austin, Tex., July 12.—Production of oil and bringing in of wells in the northwest extension of Burkburnett oil field, in Wichita county, is suspended for five days by an order of the railroad commission. This shutdown is made pending a hearing to

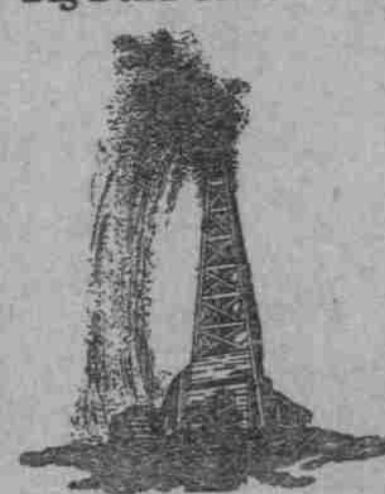

OIL IS FLOWING BY HEADS FROM THE ANDY URBAN WELL

The latest report from Abilene, Tex., is to the effect that the Andy Urban well, five miles southeast of that place, began last Monday to flow by heads and was making from two to eight barrels of oil per hour through salt water. The well has not been entirely cleared since being shot. The five inch casing was being set in case off the salt water, when the production was to be gaged.

Urban well, five miles southeast of that place, began last Monday to flow by heads and was making from two to eight barrels of oil per hour through salt water. The well has not been entirely cleared since being shot. The five inch casing was being set in case off the salt water, when the production was to be gaged.

Big Bend Oil & Gas Company

CAPITAL STOCK \$350,000.00. PAR VALUE \$1.00 PER SHARE.

The Big Bend Oil & Gas Co.

OFFICERS AND TRUSTEES:
F. A. Spence, President and Treasurer

Trustees: C. F. Morse, J. S. Crain, F. A. Spence.
Agents wanted. Office, 625 Mills Bldg., El Paso, Texas. Phone 657.

This is a joint stock company, unincorporated, which owns lease on 640 acres of land in the Big Bend of Presidio county, Texas. We all believe in geology, which is considered among the greatest of sciences. According to the Geological Map prepared by Dr. J. A. Udden of the University of Texas, this land is marked up as containing OIL, GAS, ASPHALT, COAL and QUICKSILVER. What better showing could we ask for—or what better authority could we want than Dr. Udden's? This field is opposite the famous "Rim Rock" that lies just across the Rio Grande in Mexico, and this forms an anticline which is a good indication of a strong upward flow. Also there are smaller anticlines at intervals over this land—these are essential to a good, lasting field. The formation is Upper Cretaceous, Quaternary and Pennsylvanian.

BIG BEND OIL & GAS CO.

The slightest cut in an inferior tube—Rip! and the tube is ruined. Make your dealer prove that the tube he sells will stand the Norwalk test.

The Scissors Test

Take sample piece of tube 1/4 in. by 3 in. Stretch to 9 in. or three times its original length. Cut on the edge with scissors. The cut should not be more than 1/8 in. across the sample. If the strip tears apart the rubber is inferior.

Stretched, as in the tire, good tubes do not rip when cut. They cut but do not trip.

Norwalk Tubes do not rip

Neither blow-out nor puncture can destroy Norwalk Tubes. The unavoidable cut remains a cut—it does not rip and destroy the tube. The scissors test proves this before you buy.

Norwalk Tubes are floating stock*.

Norwalk rubber floats. Compound rubber sinks. Your pencil eraser is compounded. Test its weakness.

Norwalk Tubes, red and gray, set a new standard—the standard of absolute quality. File away a dated sample of Norwalk Tube and others and compare them at the end of a year.

Norwalk Casings are as good as Norwalk Tubes.

If your local dealer cannot supply you write to

NORWALK TIRE & RUBBER COMPANY
Makers of Casing, Cord and Fabric and of Tubes, Red and Gray
Norwalk, Connecticut

*Floating stock means rubber so pure that it floats. Snip a little piece of Norwalk sample and see. Floating stock means to the rubber industry what 24k gold means to the jeweler. To you it means mileage.

You are going to learn a lot more about Norwalk quality. But don't wait. Start saving your mileage-money now. Get the stuff that's in the tube. Ask for a sample of Norwalk rubber.

NORWALK TUBES and CASINGS

WELLS CLOSED AT BURKBURNETT

Lack of Storage and Danger of Fire Causes a General Shutdown.

Wichita Falls, Texas, July 12.—Production in the northwest extension of Burkburnett was curtailed today as a result of the Texas railroad commission passing an order Friday prohibiting wells being completed in the extension.

Wells which were drilling before Friday may go to the sand. No new wells may be begun. The order became effective Friday at midnight and will continue for five days.

A hearing will be held Wednesday, whether the commission will decide to close the wells for 30 days. Two factions are at work. One wants the wells closed down for 30 days and the other wants operations continued.

Production this week at Burkburnett was 15,000 barrels greater than last week and only 1000 barrels of the extra production could be handled. The situation is growing more serious daily.

The commission has been told that within 30 days a new field will have new storage facilities of 2,000,000 barrels capacity and new pipe lines with 10,000 barrels capacity.

The commission was also told that unless production is stopped oil will not only be wasted in thousands of barrels, but the fire hazard will be great and the market will be "shot to pieces."

It is the small operators who are fighting against closing down the wells. They are selling drilling sites in large numbers now and the closing down would close up their business, as the order would prohibit new wells being started during the next 30 days.

WELLS COMING IN FROM SAND

Find Oil in Sand Instead of Black Lime or Shale in Eastland County.

A number of comparatively shallow wells are being struck north of Eastland and in northern Eastland county, Tex. They are attracting much interest, as the oil is coming from a sand instead of the black lime or shale as in the deeper wells.

The latest of these wells is Harrell-Huesco gusher, in the northern part of Eastland county. The oil was struck in a sand at 1500 feet and it is reported flowing in three minute heads at an estimated rate of 1000 barrels from only 11 feet in the sand.

This sand is believed to be the same as that struck in the Mother Pool Oil Co.'s well at about 1300 feet, on the Miller tract. It is believed to be the same sand.

The Strawn Oil Co. has a 150 barrel well on the D. Z. Pierce place. This well is three miles east of the Harrell-Huesco well. The former is 1500 feet deep. The Strawn Texas Co.'s well, on the Harrell tract, is about the same depth.

Senate Passes Dudley Bill To Liberalize Prospector Permits

Austin, Tex., July 12.—The Dudley bill, designed to liberalize the present law authorizing the land commissioner to issue permits to prospectors for oil, gas and other minerals, was finally passed by the senate Friday by a vote of 18 to 4. This bill extends the time from one year to 18 months in which prospectors shall begin boring for oil or other minerals and also permits grouping leases by one lessor.

Judge Tastes "Whisky"; Fines Negro 200 Days

Wille Terrell, negro, alleged to have sold tea for whisky at \$5 a bottle, was sentenced Friday afternoon by Judge Charles E. Pollock, to serve 200 days in jail. The charge against Terrell was vagrancy, but it was brought in court, according to the testimony that Terrell sold the tea. The judge and attorneys tasted the tea and swore it was not whisky.

TREASURER PAYS \$62,500 ON COUNTY'S LIBERTY BONDS

County treasurer A. R. Webb, on Friday afternoon, paid \$62,500, which was due on victory loan bonds, which are held by the county. This was the final payment on the bonds, leaving the county now in possession of \$125,000 worth of government paper paid up.

Total of \$125,000 already had been paid on the victory bonds, making the county's holdings in that issue \$125,000. Liberty bonds to the sum of \$125,000 already were held by the county.

APPORTIONMENT MUST BE BASED ON FEDERAL CENSUS

Austin, Texas, July 12.—The legislature having once apportioned the state, following a federal census, cannot again apportion the state into legislative districts until after the next federal census; the attorney general's department holds in an opinion.

Pullman Oil and Refining Company OF EL PASO TEXAS

An Independent Company Operating In Proven Texas Fields
PRODUCTION—REFINING—DISTRIBUTION

Officers:

President

Field Superintendent
T. C. Manning

The Pullman Oil and Refining Company is one of the larger independent oil companies operating in the Texas fields. It is not a production, but a substantial company organized by men of integrity and ability who themselves are heavily interested financially, and are depending upon the success of the company as a dividend earner to insure their own personal fortunes. It is the kind of an organization in which you want to be interested, and one that offers a same, reasonable opportunity for tremendous returns on your investment as made.

Complete Prospectus Mailed On Request

What You Want To Know

1. Our No. 1, F. M. Daniel, well now drilling at better than 1400 feet.
2. Our No. 1, G. L. French, well has derrick erected.
3. Our No. 2, F. M. Daniel, well starts drilling on July 15th.
4. Immediate drilling program calls for ten (10) deep wells in gusher territory.
5. Oil from these fields sells at \$2.25 to \$3.00 a barrel.
6. Plans for a 3000 barrel refinery now being completed.
7. Present holdings include nine tracts in the Desdemona and Duke gusher oil fields (Eastland, Comanche and Erath counties).
8. Reasonable success on the first of our drilling operations should mean dividends within 90 days.
9. Detailed information available if you will write for our prospectus, which includes a map.
10. This is a responsible company; well established today and building for big things in the not too distant future—a company in which you may have confidence.

Our Drilling Well No. 1 within some 500 feet of the Warren Wagner, a 16,000 barrel producer.

Wonder Gusher Opens New Pool Near Desdemona

The Warren Wagner Is Making 16,000 Barrels Of Oil A Day

De Leon, Texas, July 8.—The most wonderful of all wonder gushers is the Warren Wagner well, on the Terry tract, making 16,000 barrels of oil a day, while still in a state of incompleteness. The well came in Tuesday night and made 2000 barrels the first three hours, while the tools were in the well still drilling.

The well is situated across the road from the cemetery, south of Desdemona.

Well No. 1

(On Desdemona Townsite. Now drilling at better than 1400 feet).

Some 500 feet from the Warren Wagner well, on the Terry Tract, reported in, on July 9th, for 16,000 barrels of oil a day.

Located some 1,500 feet from the Magnolia Petroleum's Echols well. Reported in at 10,000 barrels daily and with a settled production of 7,000 barrels.

The same distance from the C. T. Terrell well with a reported initial production of around 4,000 barrels.

Three hundred feet from the Union Oil Company's well No. 3, reported on the sands for 1700 barrels, with prospects for much larger production when completed.

One hundred and twenty-five feet from the E. Riley Drilling Company's well, reported on the sands Tuesday, July 8th, for 400 barrels, with every indication of a tremendous well when completed.
